Session 4 – AADK Task 4

Compose Basics and UI Layouts

Name BOYATEJA
Cour Android App Development using Kotlin

Objective

To apply Jetpack Compose fundamentals by designing a Business Card UI layout using composables like Column, Row, Box, and Image. The focus is on alignment, readability, responsiveness, and accessibility.

Tools Used

- Android Studio
- Kotlin
- Jetpack Compose

UI Planning

The layout structure:

- Column (Main container)
    - Image (Logo)
    - Text (Name)
    - Text (Title)
    - Row (Contact Info)
    - Row (Email)
    - Row (Location)

Kotlin Code (MainActivity.kt)

```
@Composable
fun BusinessCard() {
   Column(
      modifier = Modifier
         .fillMaxSize()
         .padding(16.dp),
```

```
        verticalArrangement = Arrangement.Center,
        horizontalAlignment = Alignment.CenterHorizontally
    ) {

        Image(
            painter = painterResource(id = R.drawable.android_logo),
            contentDescription = "Android Logo",
            modifier = Modifier.size(100.dp)
        )

        Text(
            text="BOYATEJA",
            fontSize = 28.sp,
            fontWeight = FontWeight.Bold
        )

        Text(
            text = "Android Developer",
            fontSize = 18.sp
        )

        Spacer(modifier = Modifier.height(16.dp))

        Text(text = "Phone: 9876543210")
        Text(text="Email: teja@email.com")
        Text(text = "Location: Angondhalli, India")
    }
}
```

Reflection

- Used Column for vertical alignment
- Used Spacer for proper spacing
- Ensured readable font sizes
- Added contentDescription for accessibility
- Layout is responsive using Modifier.fillMaxSize()

Learning Outcomes

- Understood Compose structure

- Practiced layout alignment
- Improved UI readability
- Applied accessibility best practices

Conclusion

This task improved my understanding of Compose fundamentals and layout structuring. I learned how to design clean, balanced, and accessible UI components ready for real-world app development.
